Tallers Navals i Industrials

SPECIALISTS IN MARINE REPAIRS AND MAINTENANCE

Precise and thorough work

On-board service

Technology

Quick and flexible

Traditional focus on quality

Fully available whenever you need us

ABOUT US

We are a fourth-generation company with over 75 years of experience, specialising in repairing and refitting all types of vessels. Our company was originally founded to provide services to the fishing fleet from Tarragona's El Serrallo neighbourhood.

We combine traditional pride in a job well done and the know-how of our professional technicians and mechanics with our many years of professional experience and the possibilities offered by new technologies.

We are known for the flexibility and full availability we offer for management and repairs, as well as for our personalised service and specialised skills.

WHAT WE DO

At Talleres Gil Almagro we offer solutions to meet all of your needs, everything from quick, one-time repairs to comprehensive design projects working in collaboration with an engineering team.

We offer general repair and refit solutions for all types of vessels: fishing boats, sailboats and yachts of all sizes, and cargo and transport ships (including tugboats, tenders, and merchant vessels).

Specialists in marine mechanics: repair and maintenance of diesel engines, generators, reduction gears, electric motors, hydraulic systems, and injection and turbo pumps. We also perform injector inspections, compressor testing, cylinder head resurfacing, and engine alignment. We are official Cummins and John Deere Marine distributors, but we also carry many other brands of engines, reduction gears, generators, and replacement parts.

Specialists in framework: manufacture and modification of bar and pipe structures made of all types of materials: carbon steel, stainless steel, aluminium, copper-nickel, and high-tech plastics. We offer polishing and chrome plating. Our hydraulic press and bending and cutting equipment allow us to work with all types of polished on-deck stainless steel parts with a marine finish.

Specialists in machining: We have turning equipment that allows us to work with shafts over six metres long. Our milling cutters and lathes allow us to machine parts such as bolts, shaft lines, pinions, pulleys, armatures, pins, and keys.

- Experience worry-free navigation
- First-rate customer service from the first contact
- Fourth generation of specialists

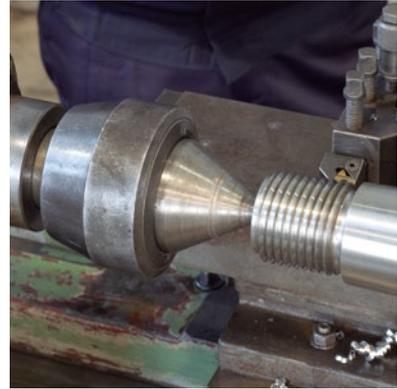

Specialists in marine welding: arc welding, tungsten inert gas (TIG) welding, and semi-automatic wire feed welding. We can work with carbon steel, aluminium, stainless steel, and cupronickel. Our facilities on the Mediterranean coast offer certified marine welding work (ship plate) using welders, materials, and procedures with Bureau Veritas Certification.

Specialists in hydraulics: We manufacture and maintain hydraulic systems, including the supply and repair of pressure pumps, chrome pistons, pressure distributors, hydraulic cylinder barrels, threaded joints and retainers, and rigid and flexible hoses.

Specialists in piping and valves: We supply and repair of all types of valves, couplings, piping, and accessories. Welded or non-welded steel pipes in millimetres or inches and in a variety of materials: carbon steel, stainless steel, aluminium, cupronickel. Cast iron, stainless steel, CR brass, and naval brass valves. Joint systems using couplings, welds, threads, and press-fitting: a non-welded pipe joining system using officially approved pressing for a maximum pressure of 16 bar.

Specialists in marine supply and installation: We distribute parts and supplies for diesel engines, reduction gears, generators, freshwater and seawater pumps, and hydraulic systems, as well as safety equipment, electrical and electronic navigation gear, and interior and exterior covering materials.

We supply marine electrical and electronics solutions. We work with boats and ships from all over the world, whose owners choose Tarragona and Port Tarraco for their routine repair work. We work with sailboats and yachts from our region's marinas, fishing boats from the El Serrallo harbour, and cargo and service vessels from the Port of Tarragona.

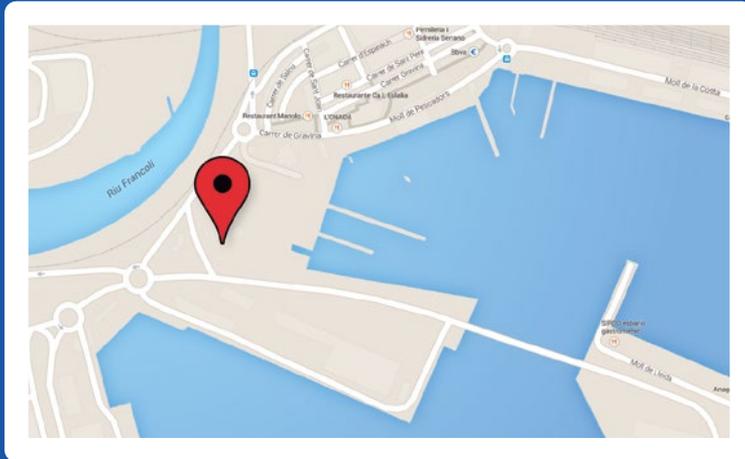

- Quick work to get you back on the water fast
- Repair & refit: comprehensive, personalised services
- Quick and effective customised solutions
- Meticulous marine maintenance and repair services with attention to detail

OUR LOCATION

Our location in Tarragona's El Serrallo neighbourhood is both strategic and easy to access, on the Fisherman's Association dry-dock near the fishermen's harbour, the Tarragona Yacht Club, the Port of Tarragona, and Port Tarraco Marina. The dry-dock has a travel lift that can raise and haul out vessels of up to 275 tonnes.
